1. Air Quality Monitoring & Pollution Analysis

Problem Statement

Analyze air-quality sensor measurements collected over time and develop a visualization system that identifies **pollution patterns, peaks and relationships between pollutants**.

2. Bank Marketing Campaign Analysis

Problem Statement

A bank conducted marketing campaigns to encourage customers to subscribe to a term deposit. Analyze the campaign data to understand **customer characteristics, campaign performance and subscription patterns**.

3. Airbnb: Is the City Becoming Unaffordable?

Problem Statement

Analyze Airbnb listings to understand **housing prices, neighborhood patterns and accommodation availability**.

Competition twist

Instead of simply finding expensive neighborhoods, answer:

"What does the Airbnb market reveal about the structure of accommodation in the city?"

4. The Ultimate Challenge — Build a Data Story

Problem Statement

Participants are given a **large multidimensional dataset without a predefined business question**.

Their task is to:

- Explore the dataset.
- Identify an interesting problem.
- Develop a hypothesis.
- Build visualizations to investigate it.

- Create a final interactive dashboard.
- Present their findings as a **5-minute data story**.

5. CAMPUSPULSE — Smart Campus Operations Challenge

Problem Statement

Analyze the CampusPulse dataset and build an interactive data visualization that identifies campus congestion hotspots, uncovers the factors driving operational bottlenecks, and translates these insights into actionable decisions for improving campus efficiency and student experience.

The final presentation should ultimately answer one question:

"If you were given the responsibility of improving this university campus, what three data-driven changes would you make first, and why?"
